

The Resilience and Staying Power of Copper

And don't be fooled into thinking that **copper** is just a fad. There has been a steadily growing representation of products and designs using this metal over the past few years.

In 2013 members of the Scandinavian firm **FRONT** designed a shower fitting out of copper and brass. This Seussian project come art installation proved both functional and form-worthy and is now aptly displayed at the **New York Museum of Art and Design**. The project would receive acclaim in the May 2015 issue of **Interior Design**.

Also in 2013, renowned architect **Anne Fougeron** chose to clad a cliff-side home overlooking the Pacific Ocean in copper and glass. This project would grace the cover of **Architectural Record** in June 2014.

Throughout 2014, **Architectural Record**, **Interior Design**, **KB+B**, and **Houzz.com** have all featured products as varied as wall coverings, floor coverings, interior accessories, lighting, furniture fittings, material, and artwork, all either formed or accented with copper.

Today Kartell Salone del Mobile 2015 even offers the Masters Chair designed by **Phillipe Starck** in collaboration with **Eugeni Quitllet** in metallic finishes, **copper** the newest amongst them.

This resilient and versatile metal dates back to ancient civilization. In addition to the majesty of its bright auburn hue, **copper** has natural antimicrobial properties, resists corrosion, and is 100% recyclable.
