A doorstop turns into a work of art!

A doorstop is a practical tool in many buildings and private homes. It has a simple, but important job to perform - to protect the door and surrounding walls from blows and impact marks - and the doorstop is therefore often places where you do not pay much attention to it. If you notice it, it is often because it has an odd design or the protecting rubber is missing.

Our lead designer Professor Knud Holscher has yet again made a stroke of genius! He has made a doorstop that is practical, simple and does what it's supposed to, but at the same time is so beautiful that you wish to install it where everybody can see it! Furthermore the doorstop is easy to install and the doorstop rubber is practically irremovable without tools, so that theft and vandalism can be avoided. The doorstop is of course in the usual d line quality and can be supplied in 2 different heights, 15 and 30 mm.
